

# Memo

Date: Thursday, May 12, 2022

Project: Terrace Development

To: Travis Russell, Morgan Group

From: Leslie Pollack, P.E., PTOE, HDR Engineering, Inc.

Subject: Terrace Development Driveway Operations

## Introduction

The Terrace development is located northeast of the intersection of RM 620 and Bee Cave Parkway in Bee Cave, Texas, as shown in Figure 1. The development is anticipated to consist of two sites, South Site and North Site, with the following proposed land uses:

- 60 dwelling units of low-rise multi-family housing (South Site)
- 370 dwelling units of mid-rise multi-family housing (North Site)

The development is expected to be complete by 2024. As shown in Figure 1, access is proposed to the South Site via one right-in, right-out driveway (Driveway A) and one full-purpose driveway (Driveway B) on Bee Cave Parkway. Access to the North Site is proposed via one full-purpose driveway (Driveway C) and one right-in, right-out driveway (Driveway D) on Bee Cave Parkway. A secondary right-in, right-out driveway (Driveway E) on RM 620 is under evaluation.

The purpose of this memorandum is to document the current driveway operations and the impact of the addition of Driveway E on area traffic operations.

## Site Generated Traffic

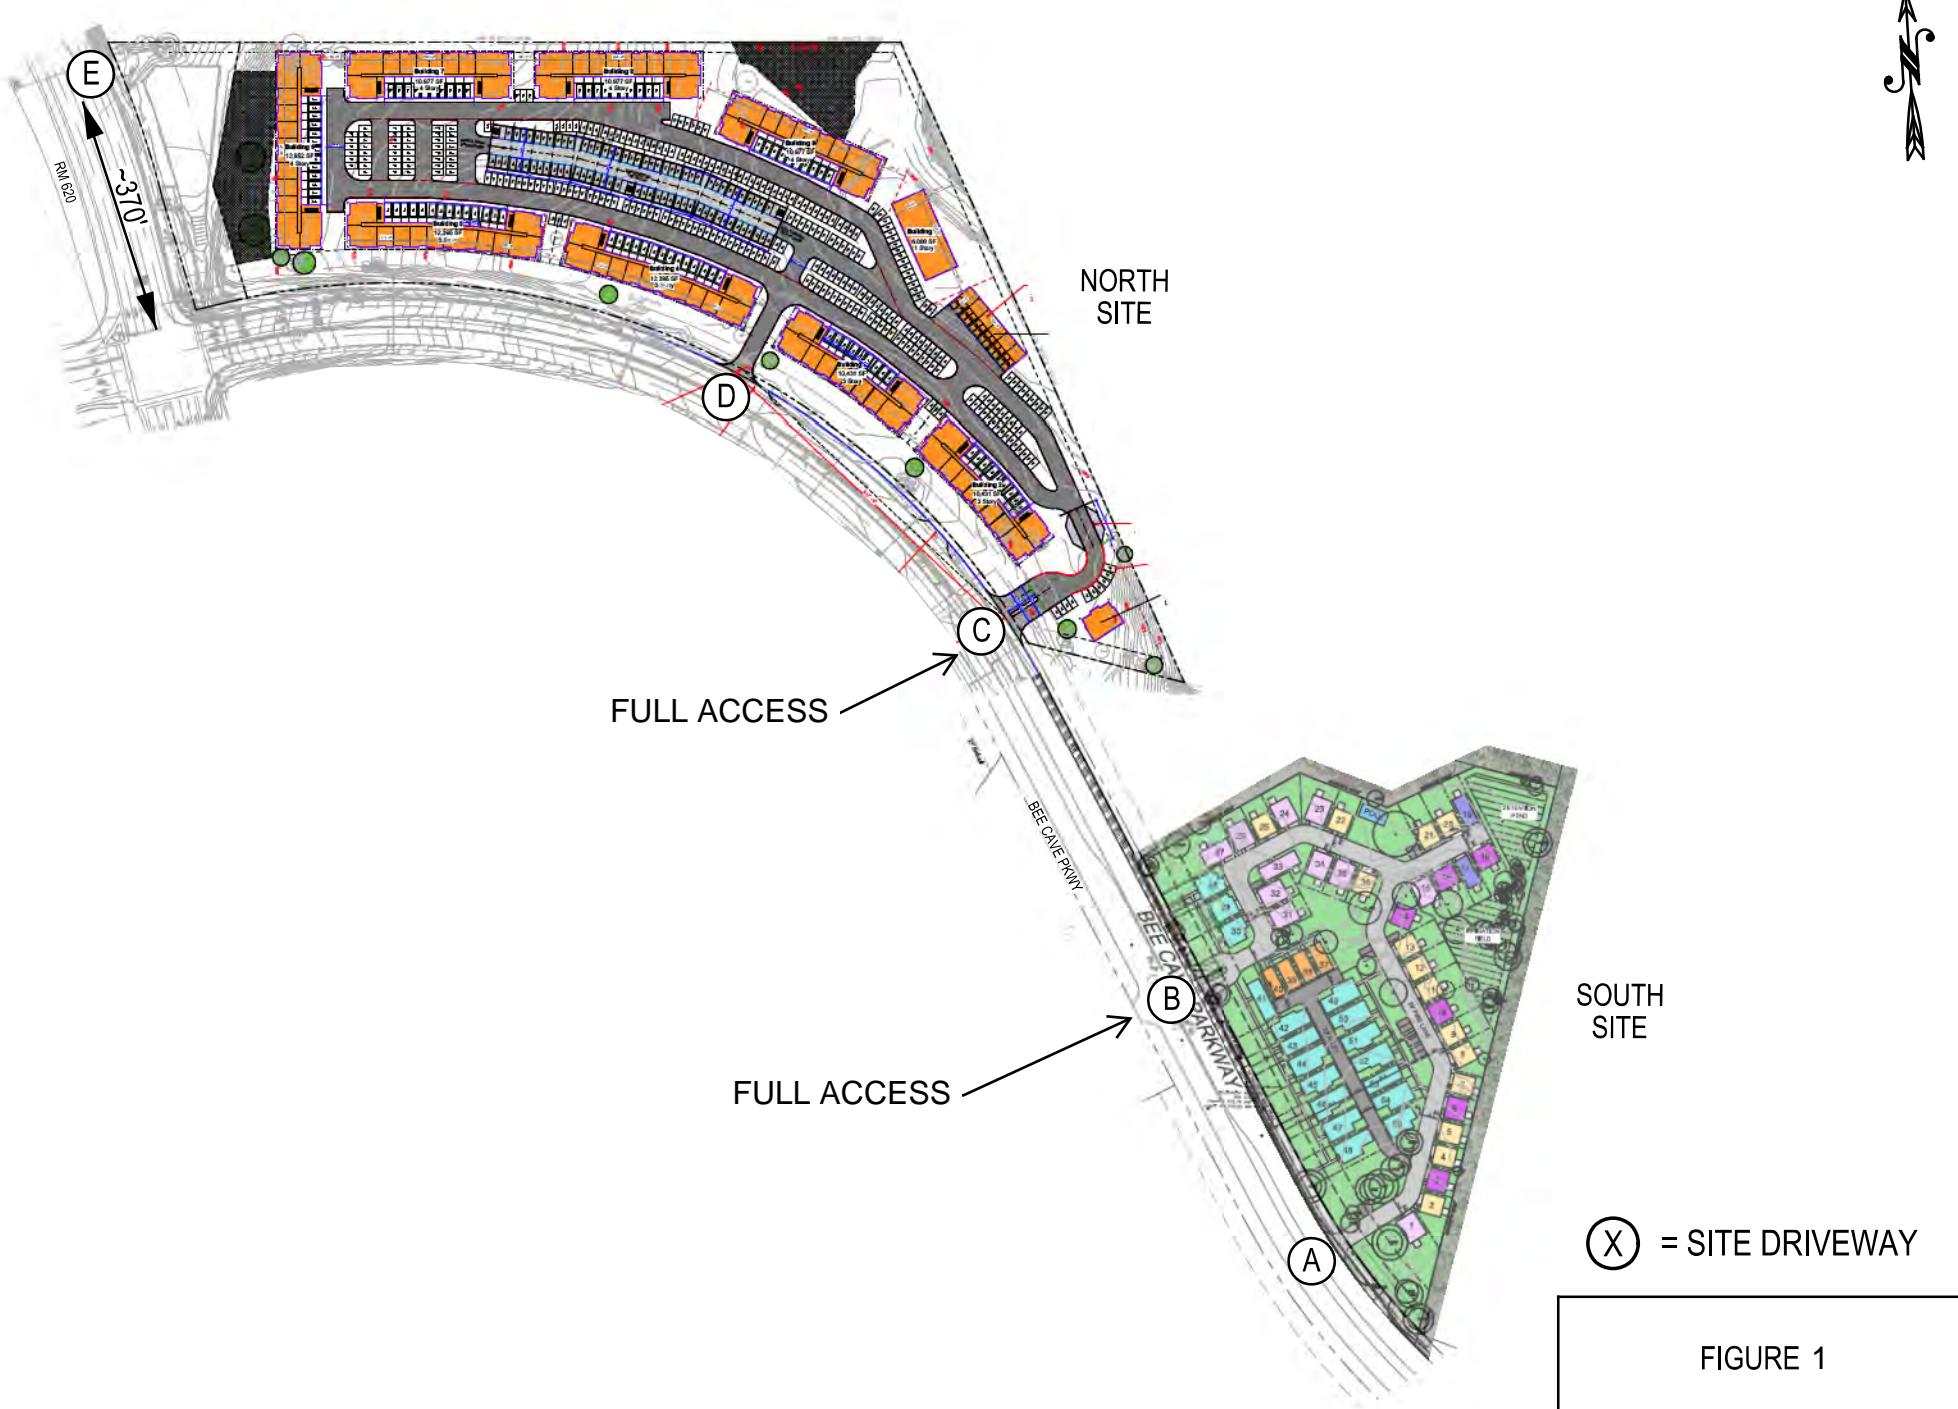

Determining the site generated traffic, or the traffic that will be generated due to the development of the proposed project, was a major element of this analysis. Unadjusted total trips per day, as well as the peak hour traffic associated with the project, were estimated using recommendations and data contained in the Institute of Transportation Engineers Trip Generation, 10th Edition (Ref. 6).

**Table 1. Summary of Unadjusted Daily and Peak Hour Trip Generation**

Site	Land Use Code	Land Use	Units	Trip Generation Method	Weekdays	AM Peak		PM Peak	
						Trips	Enter	Exit	Enter
South Site	220	Multifamily Housing (Low-Rise)	60 DU	Fitted Curve	413	6	23	23	14
North Site	221	Multifamily Housing (Mid-Rise)	370 DU	Rate	2,015	34	99	99	64
Total					2,428	40	122	122	78

## Background Traffic

To account for the impact of the COVID-19 pandemic on traffic volumes, the turning movement volumes collected in 2021 were compared with volume data collected in 2019. A three (3) percent annual growth rate was applied to the 2019 data and a COVID-19 adjustment factor was formulated by dividing the adjusted 2019 traffic counts by the existing 2021 traffic counts for each intersection.

Using an average adjustment factor for all intersections, COVID-adjustment factors of 1.06 and 1.13 were calculated for the AM and PM peak hours, respectively. The adjustment factors were applied to the existing traffic counts to obtain 2021 existing “adjusted” traffic conditions.

In order to estimate 2024 forecasted (without site) traffic volumes, it is necessary to perform two steps. The first is to apply a growth rate to the 2021 existing “adjusted” counts. Based on discussion with the City, a three (3) percent annual growth rate was assumed for the study.

The second step is to add traffic resulting from other projects in the area that are anticipated to be completed prior to buildout of this site. The following “other” projects were included:

- The Backyard
- The Village at Spanish Oaks (20% assumed)

### **Directional Distribution**

The next step involved distribution of the site generated trips to appropriate geographic directions and logical connecting roadways. The major thoroughfares that have a direct bearing on the accessibility of the project have been previously identified. Traffic counts provided the basis for the overall directional distribution of traffic approaching and departing both the North Site and the South Site, as summarized in Table 2.

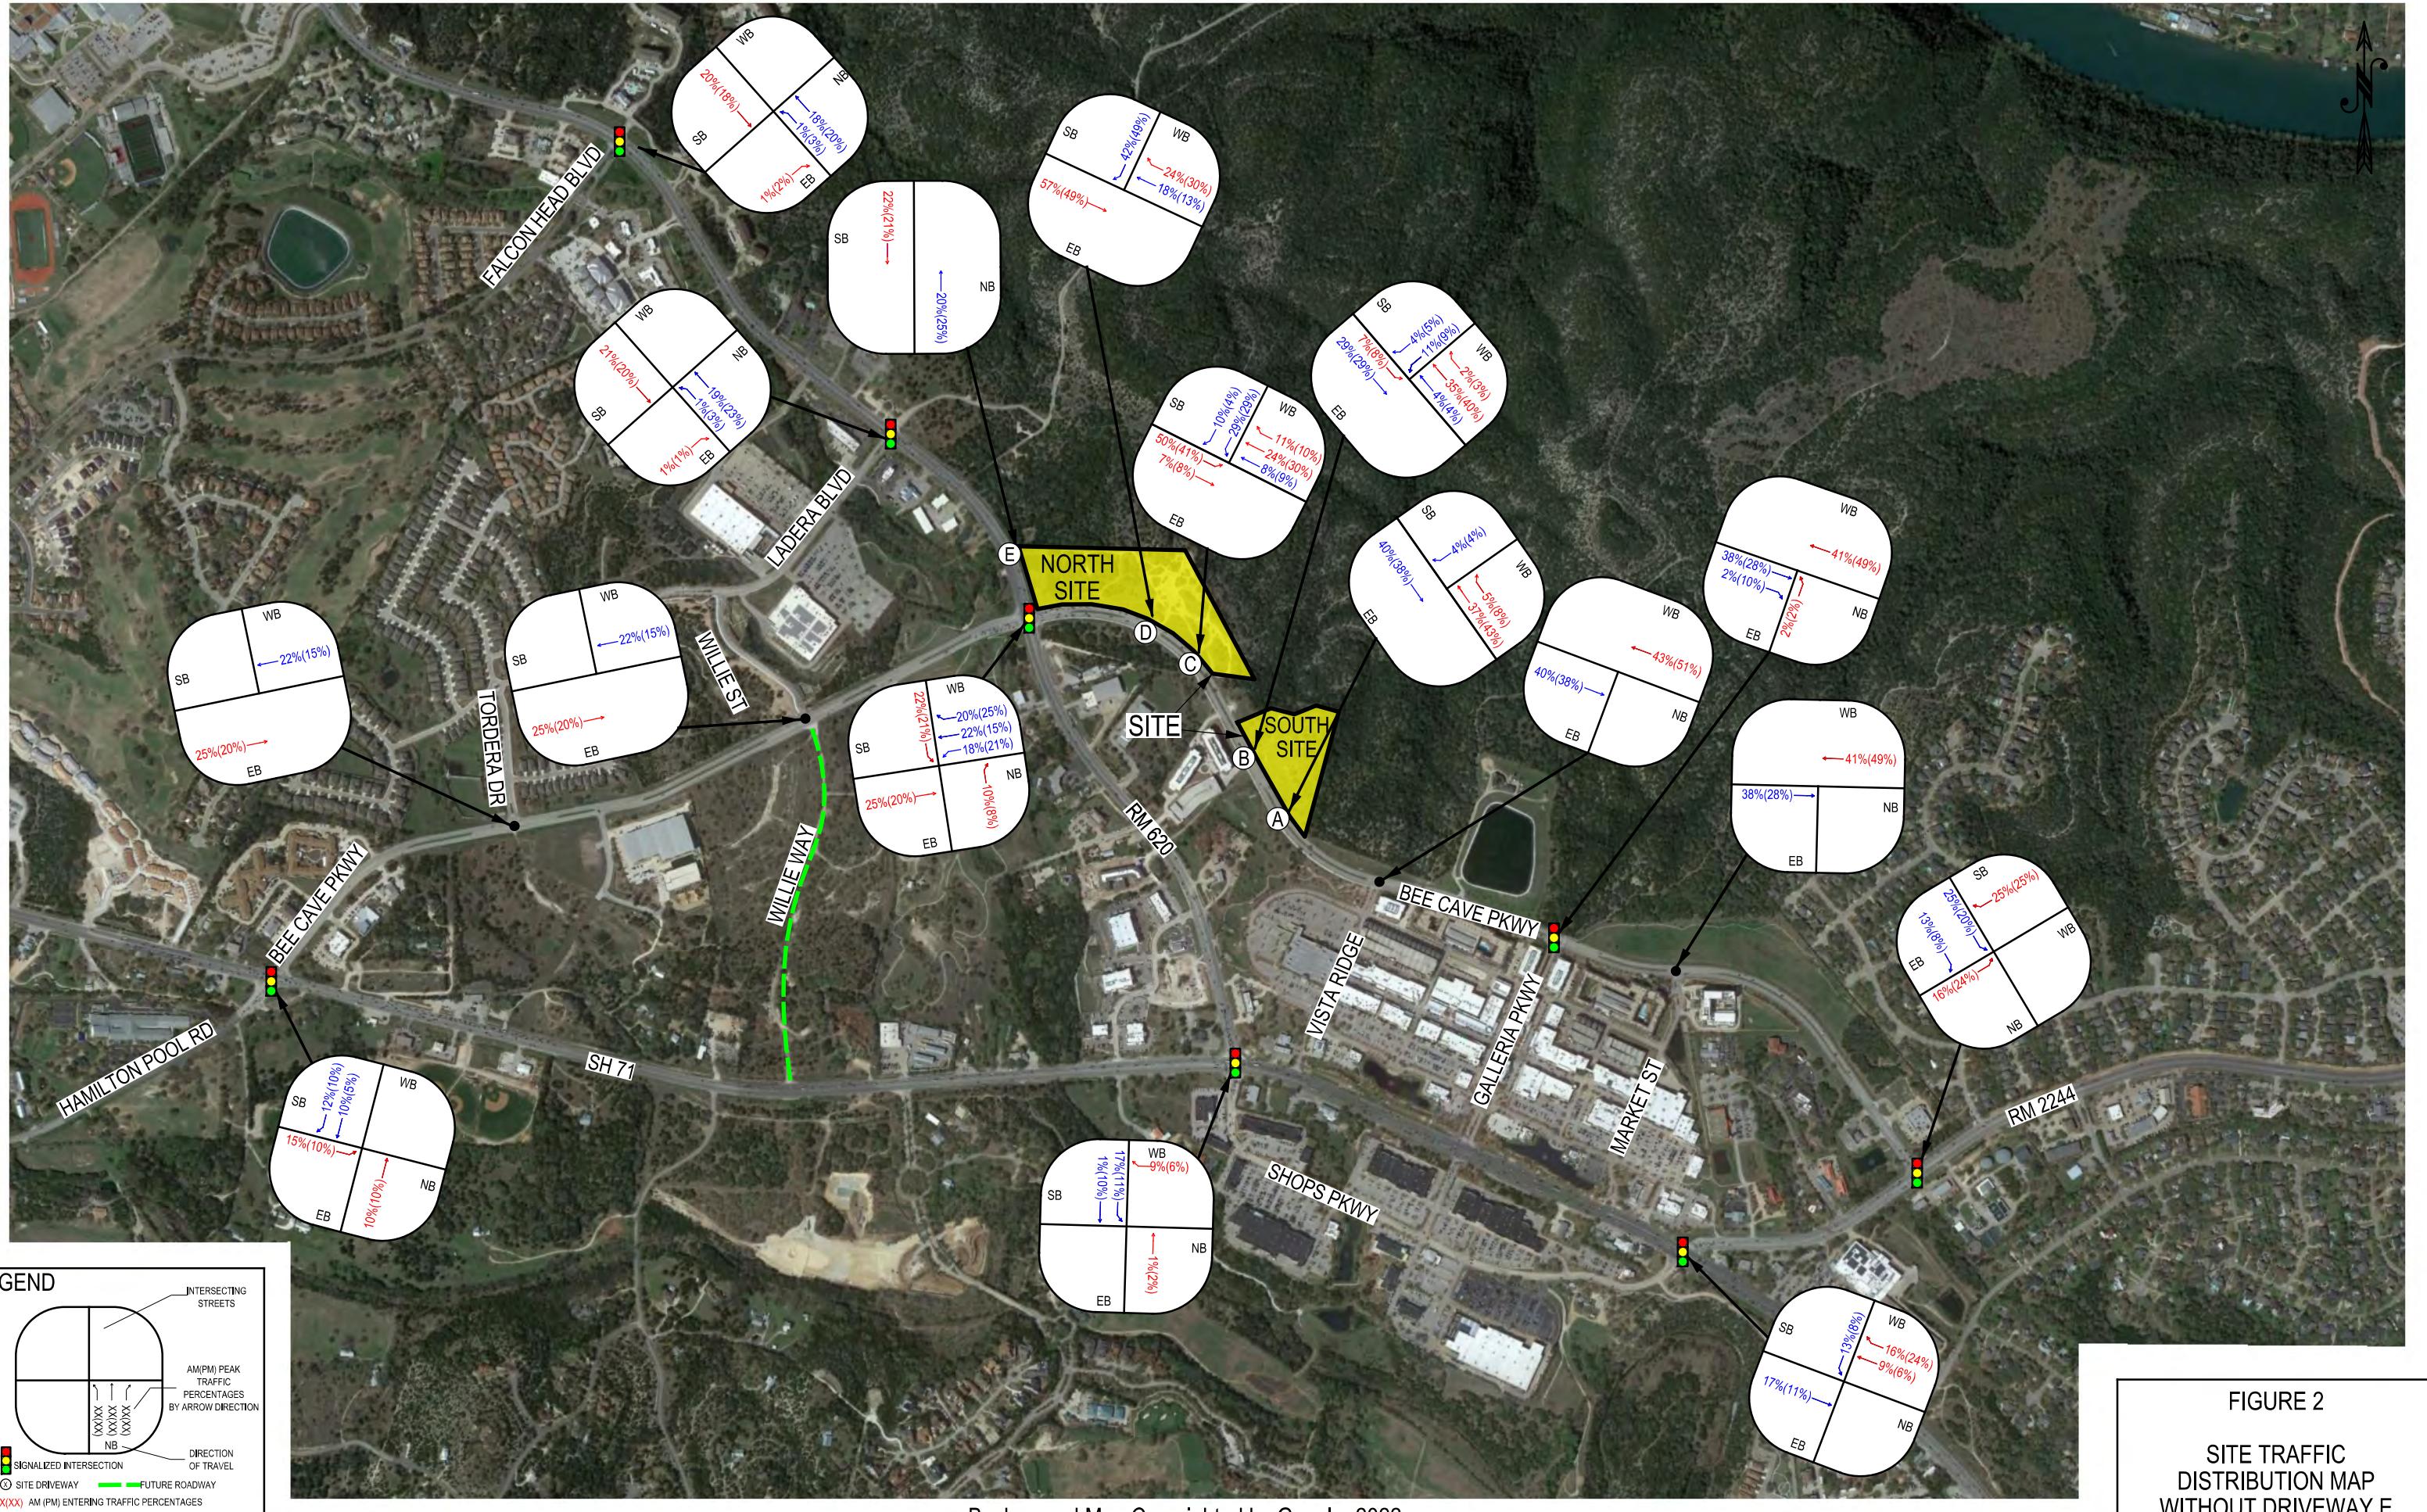

**Table 2. Forecasted Overall Directional Distribution of Site-Oriented Traffic**

Direction/Roadway	Percent of Site Traffic			
	AM Peak		PM Peak	
	Enter	Exit	Enter	Exit
East SH 71	25.0%	30.0%	30.0%	19.0%
West SH 71	15.0%	12.0%	10.0%	10.0%
RM 620	20.0%	18.0%	18.0%	20.0%
RM 2244	25.0%	25.0%	25.0%	20.0%
Hamilton Pool Rd.	10.0%	10.0%	10.0%	5.0%
West Ladera Blvd.	1.0%	1.0%	1.0%	3.0%
West Falcon Head Blvd.	1.0%	1.0%	2.0%	3.0%
Galleria Pkwy.	2.0%	2.0%	2.0%	10.0%
Shops Pkwy.	1.0%	1.0%	2.0%	10.0%
<b>Total</b>	<b>100%</b>	<b>100%</b>	<b>100%</b>	<b>100%</b>

Given the total site generated traffic and the directional distribution by approach, the next step in the process is to assign the traffic destined to and from the project to the most likely travel paths. This step was performed by investigating a number of alternative travel patterns, as well as ingress/egress points along the project boundaries. Primary consideration was given to the traffic flow and safety of the major roadways. The site traffic distribution by entering and exiting traffic is shown in Figure 2.

### **Site Driveway Analysis**

The Terrace development is proposed to be accessed by four driveways on Bee Cave Parkway, with no internal connection between the South and North Sites. One additional driveway on RM 620 is under evaluation. The driveways are proposed to operate as follows:

- South Site
  - Driveway A – right-in, right-out
  - Driveway B – full purpose
- North Site
  - Driveway C – full-purpose
  - Driveway D – right-in, right-out
  - Driveway E – right-in, right-out driveway under evaluation

Table 3 shows the expected delay for left-turning vehicles out of the Terrace development at Driveways B and C. A signal is not anticipated to be warranted at either location.

**Table 3. 2024 Site Plus Forecasted Minor Street Left-Turn Movement Delay**

Intersection	AM	PM
	Delay (sec/veh)	Delay (sec/veh)
Bee Cave Parkway and Driveway B	60.2	155.4
Bee Cave Parkway and Driveway C	100.9	429.7

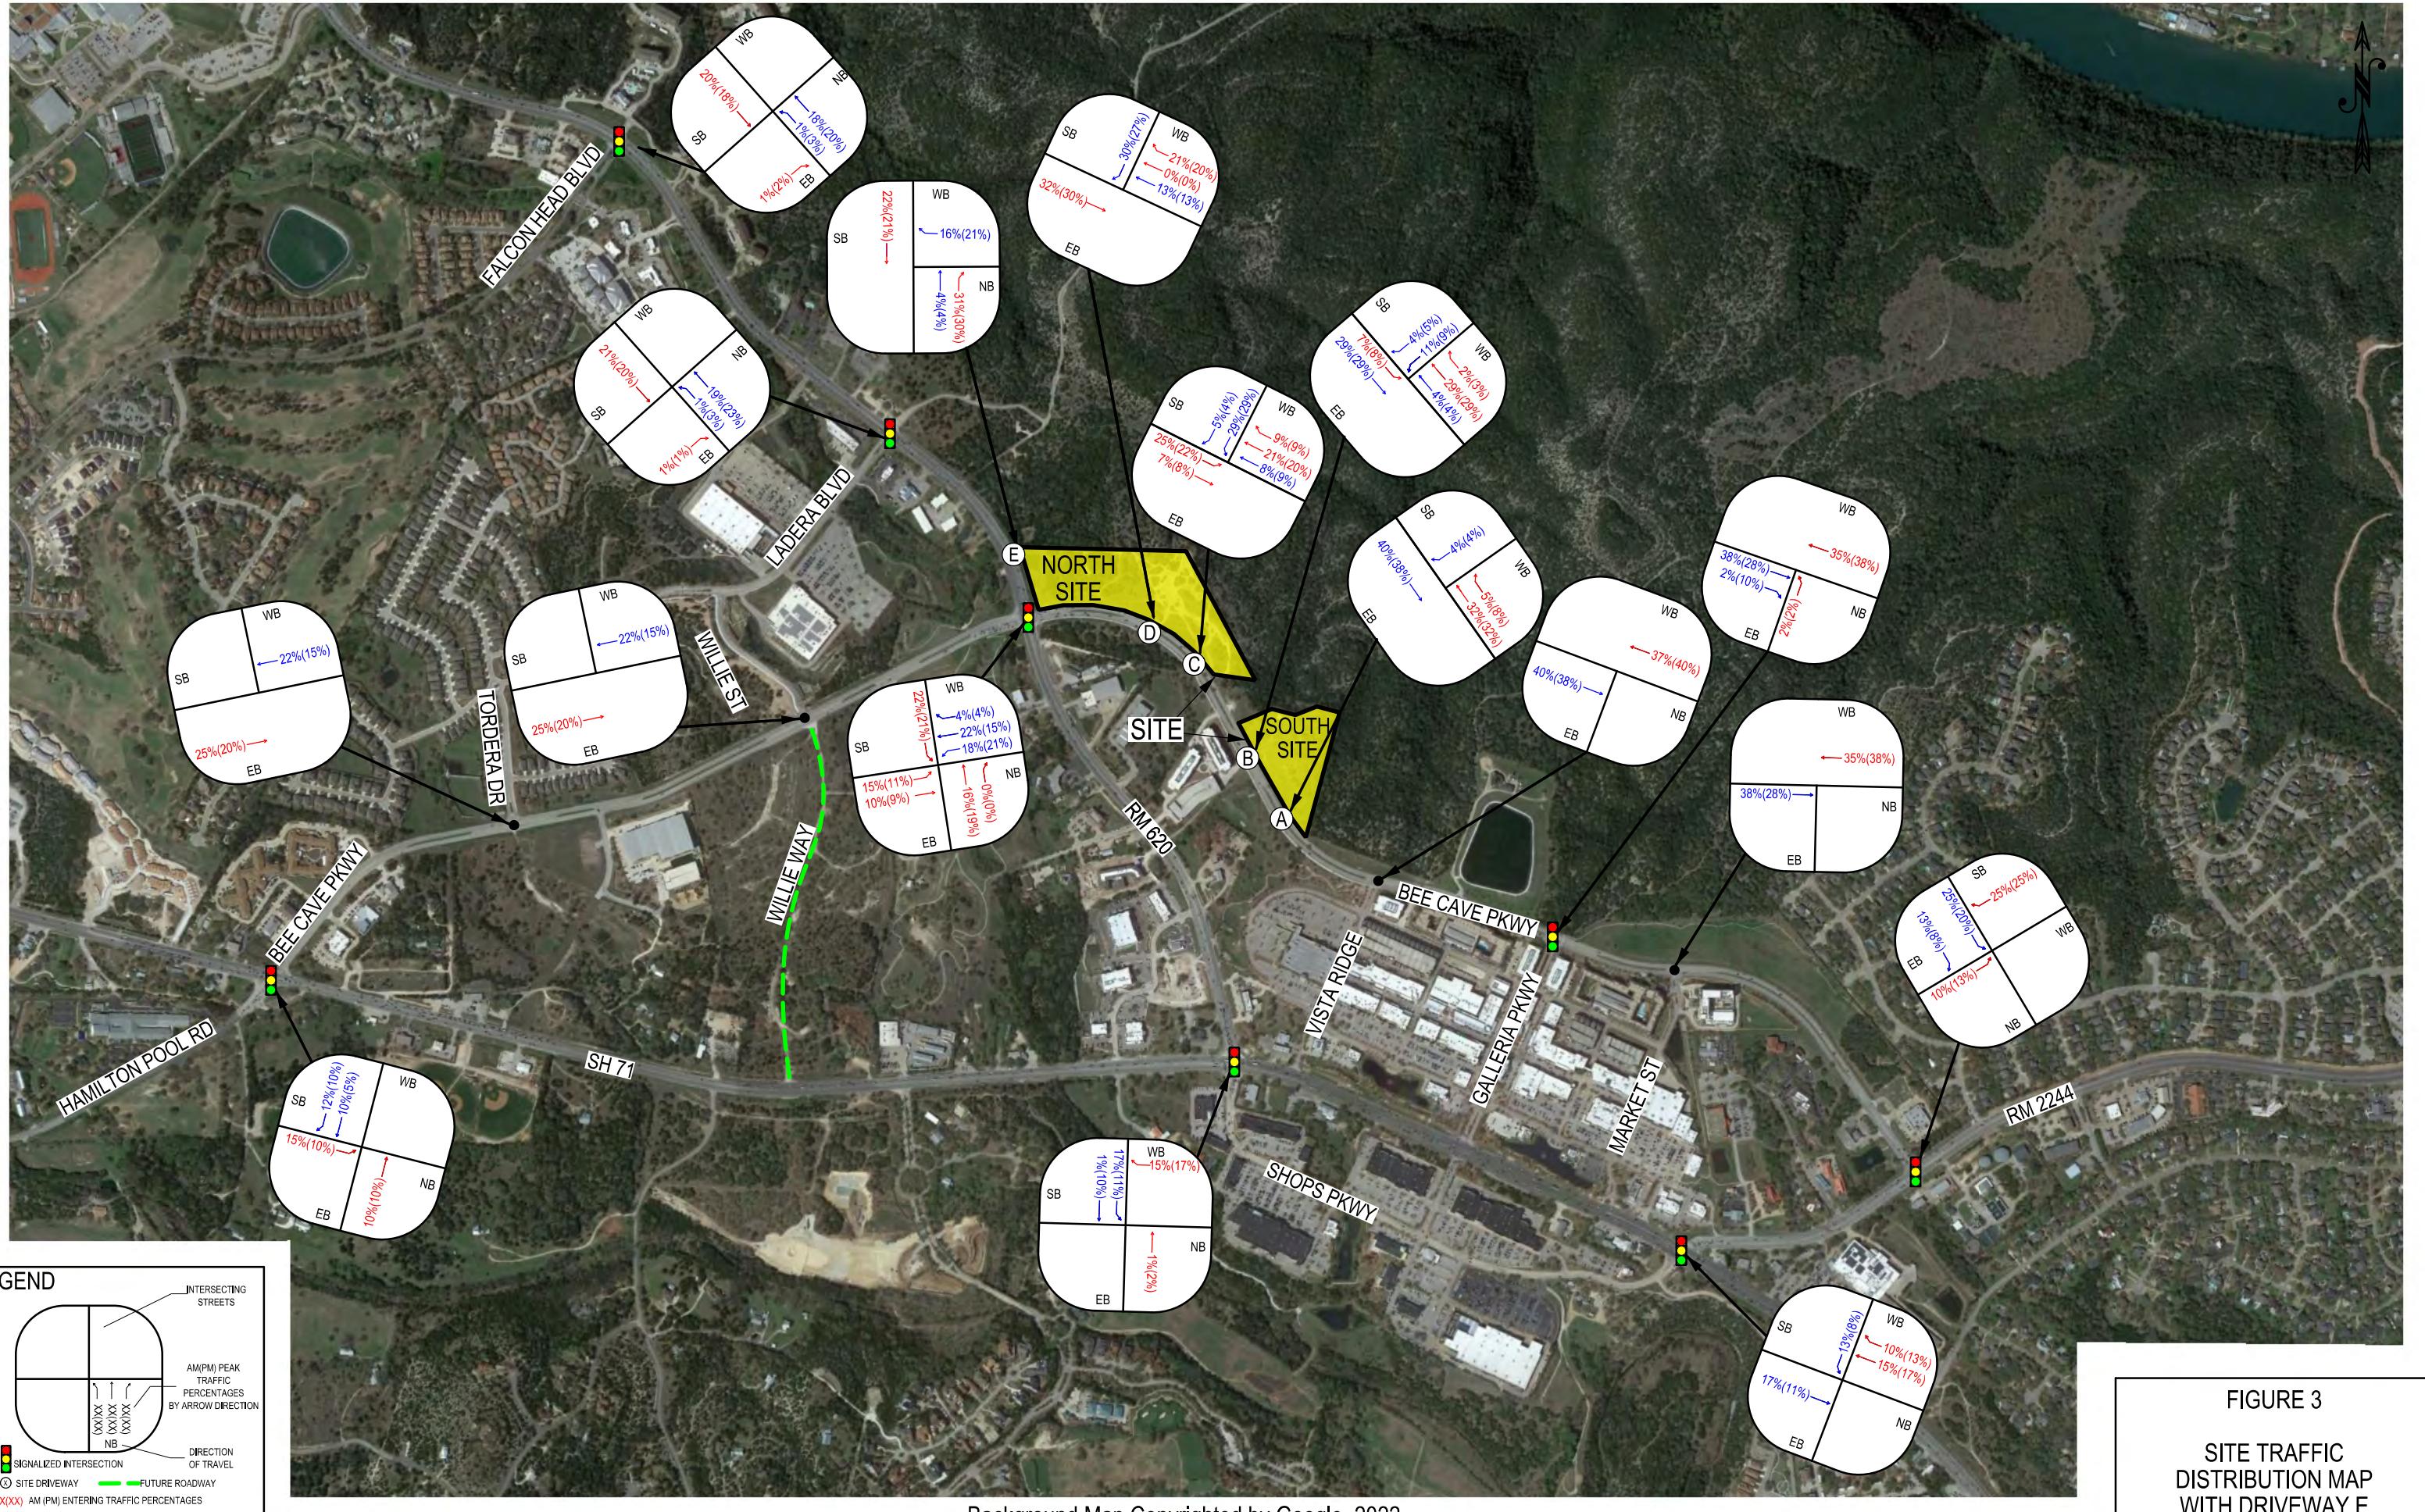

During the PM peak, the average left-turn delay per vehicle is more than two minutes at Driveway B and 7 minutes at Driveway C due to insufficient gaps in traffic on Bee Cave Parkway.

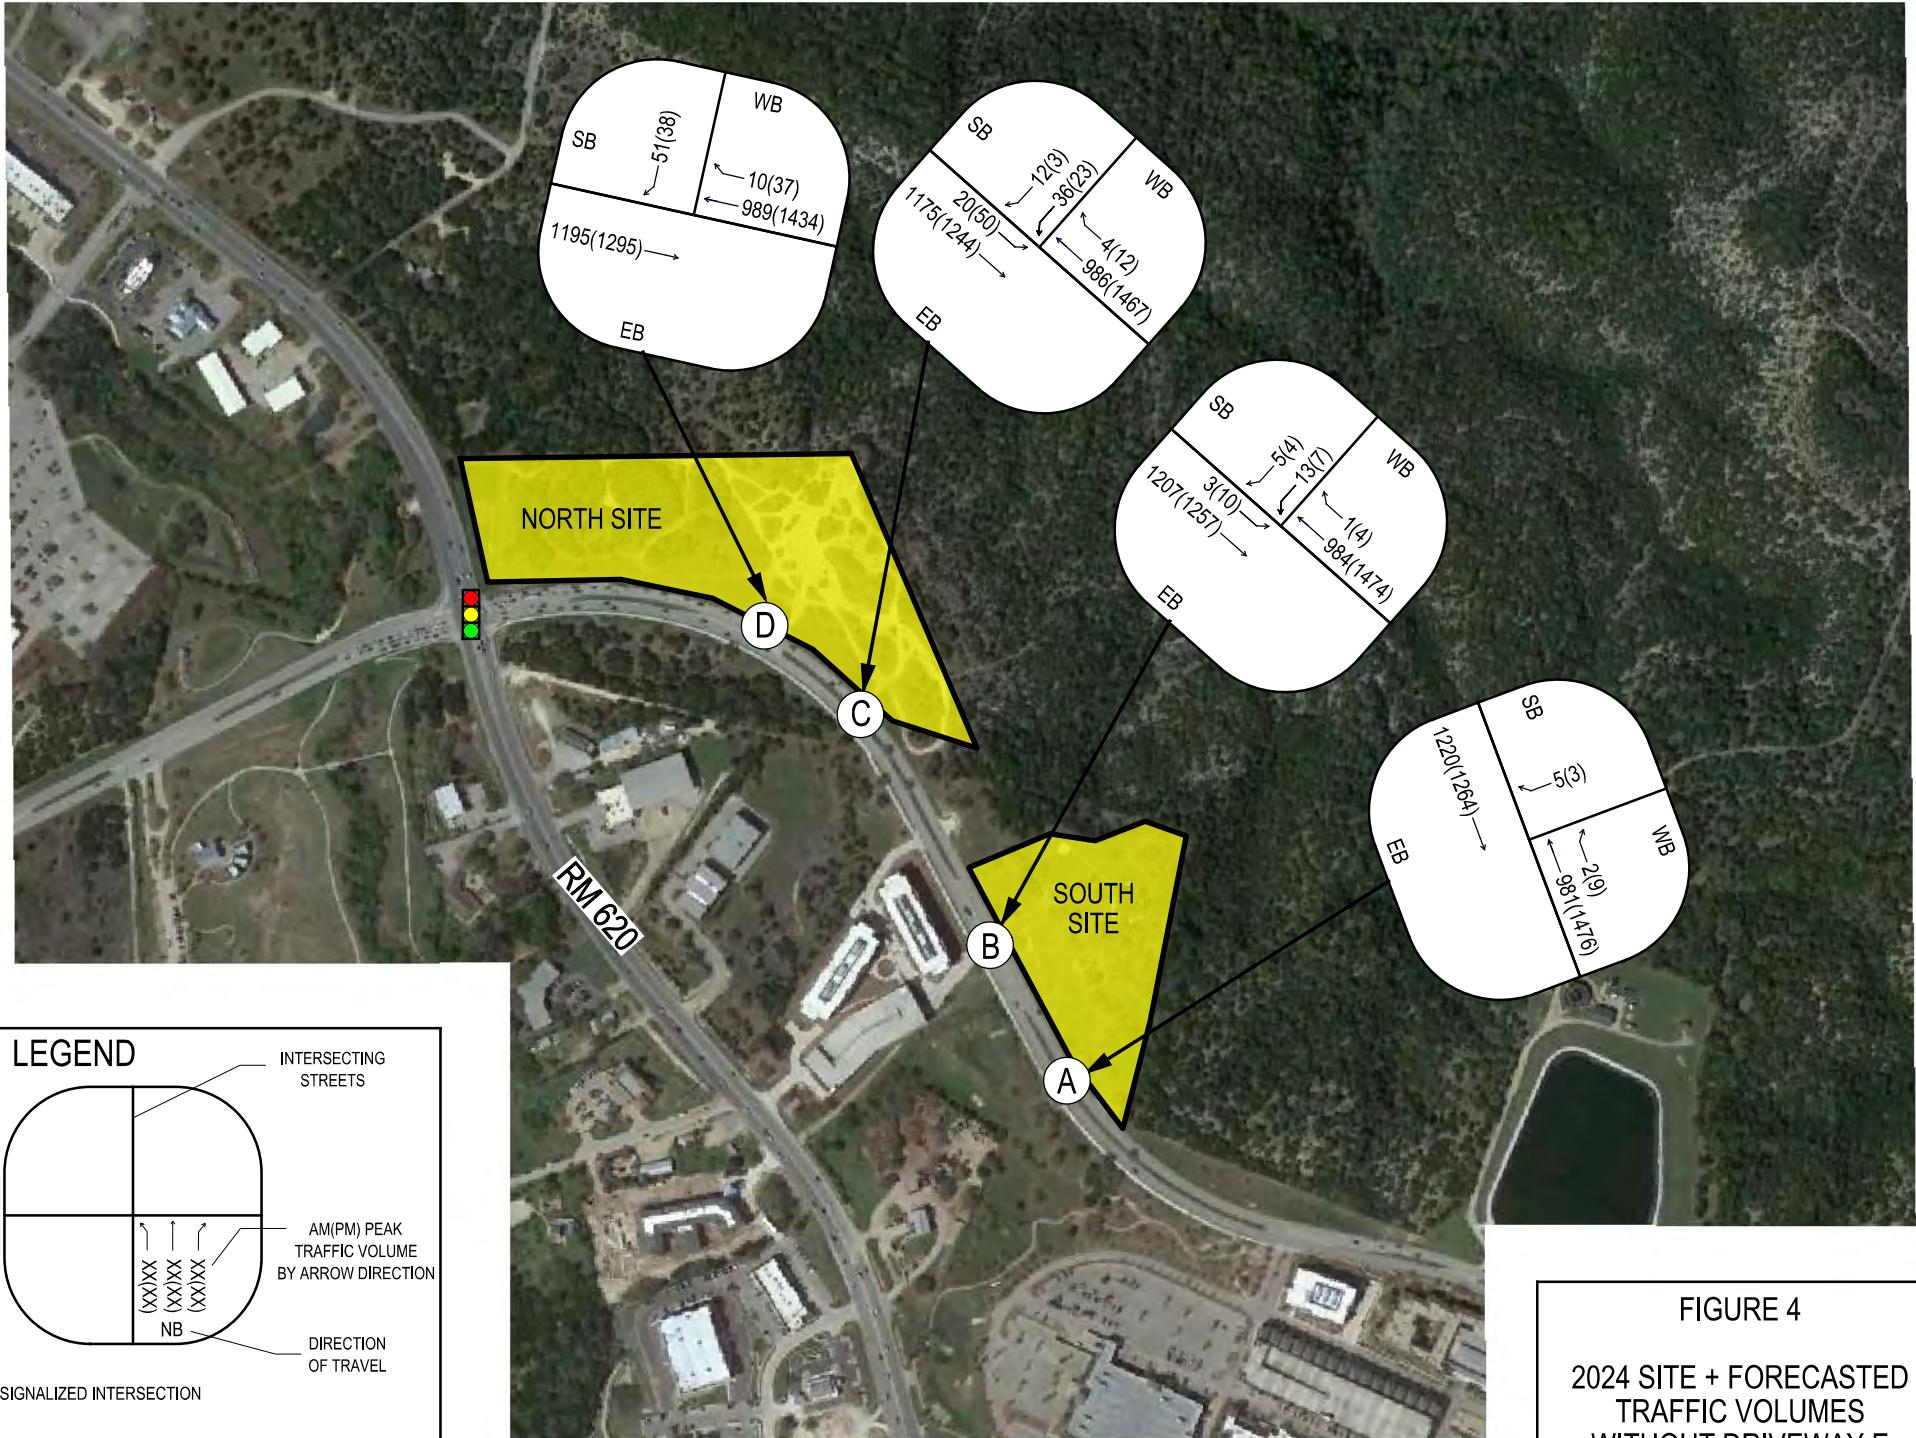

#### **Proposed RM 620 Driveway**

Driveway E would be constructed as a right-in, right-out driveway on the northern property line of the Terrace development, approximately 370' north of Bee Cave Parkway on the east side of RM 620. The posted speed limit on RM 620 in the vicinity of the site is 55 miles per hour. The TxDOT Access Management Manual recommends a driveway spacing of 425' (edge to edge) at the posted speed limit. The TxDOT Roadway Design Manual recommends construction of a deceleration lane of 540' in length at the driveway. There is insufficient space to construct a full-length deceleration lane. Even assuming a 20 mph speed differential, the shortened deceleration lane (375') is still greater than the available space. A short taper was assumed to be constructed at Driveway E on RM 620 to facilitate vehicles entering the driveway and would be detailed during the design phase, if required.

Traffic accessing the North Site of the Terrace development was redistributed to utilize Driveway E on RM 620 in addition to Driveway C and Driveway D on Bee Cave Parkway. The overall directional distribution was not changed; however, the number of vehicles entering Driveway C and Driveway D was adjusted to reflect the additional access point. Driveway E will serve vehicles entering the North Site from SH 71, Hamilton Pool Road, Hill Country Galleria, Shops at the Galleria, and RM 2244 and vehicles exiting the Site to north RM 620, Ladera Boulevard, and Falcon Head Boulevard. 12 and 36 entering vehicles and 20 and 17 exiting vehicles would be relocated to Driveway E in the AM and PM peak periods, respectively.

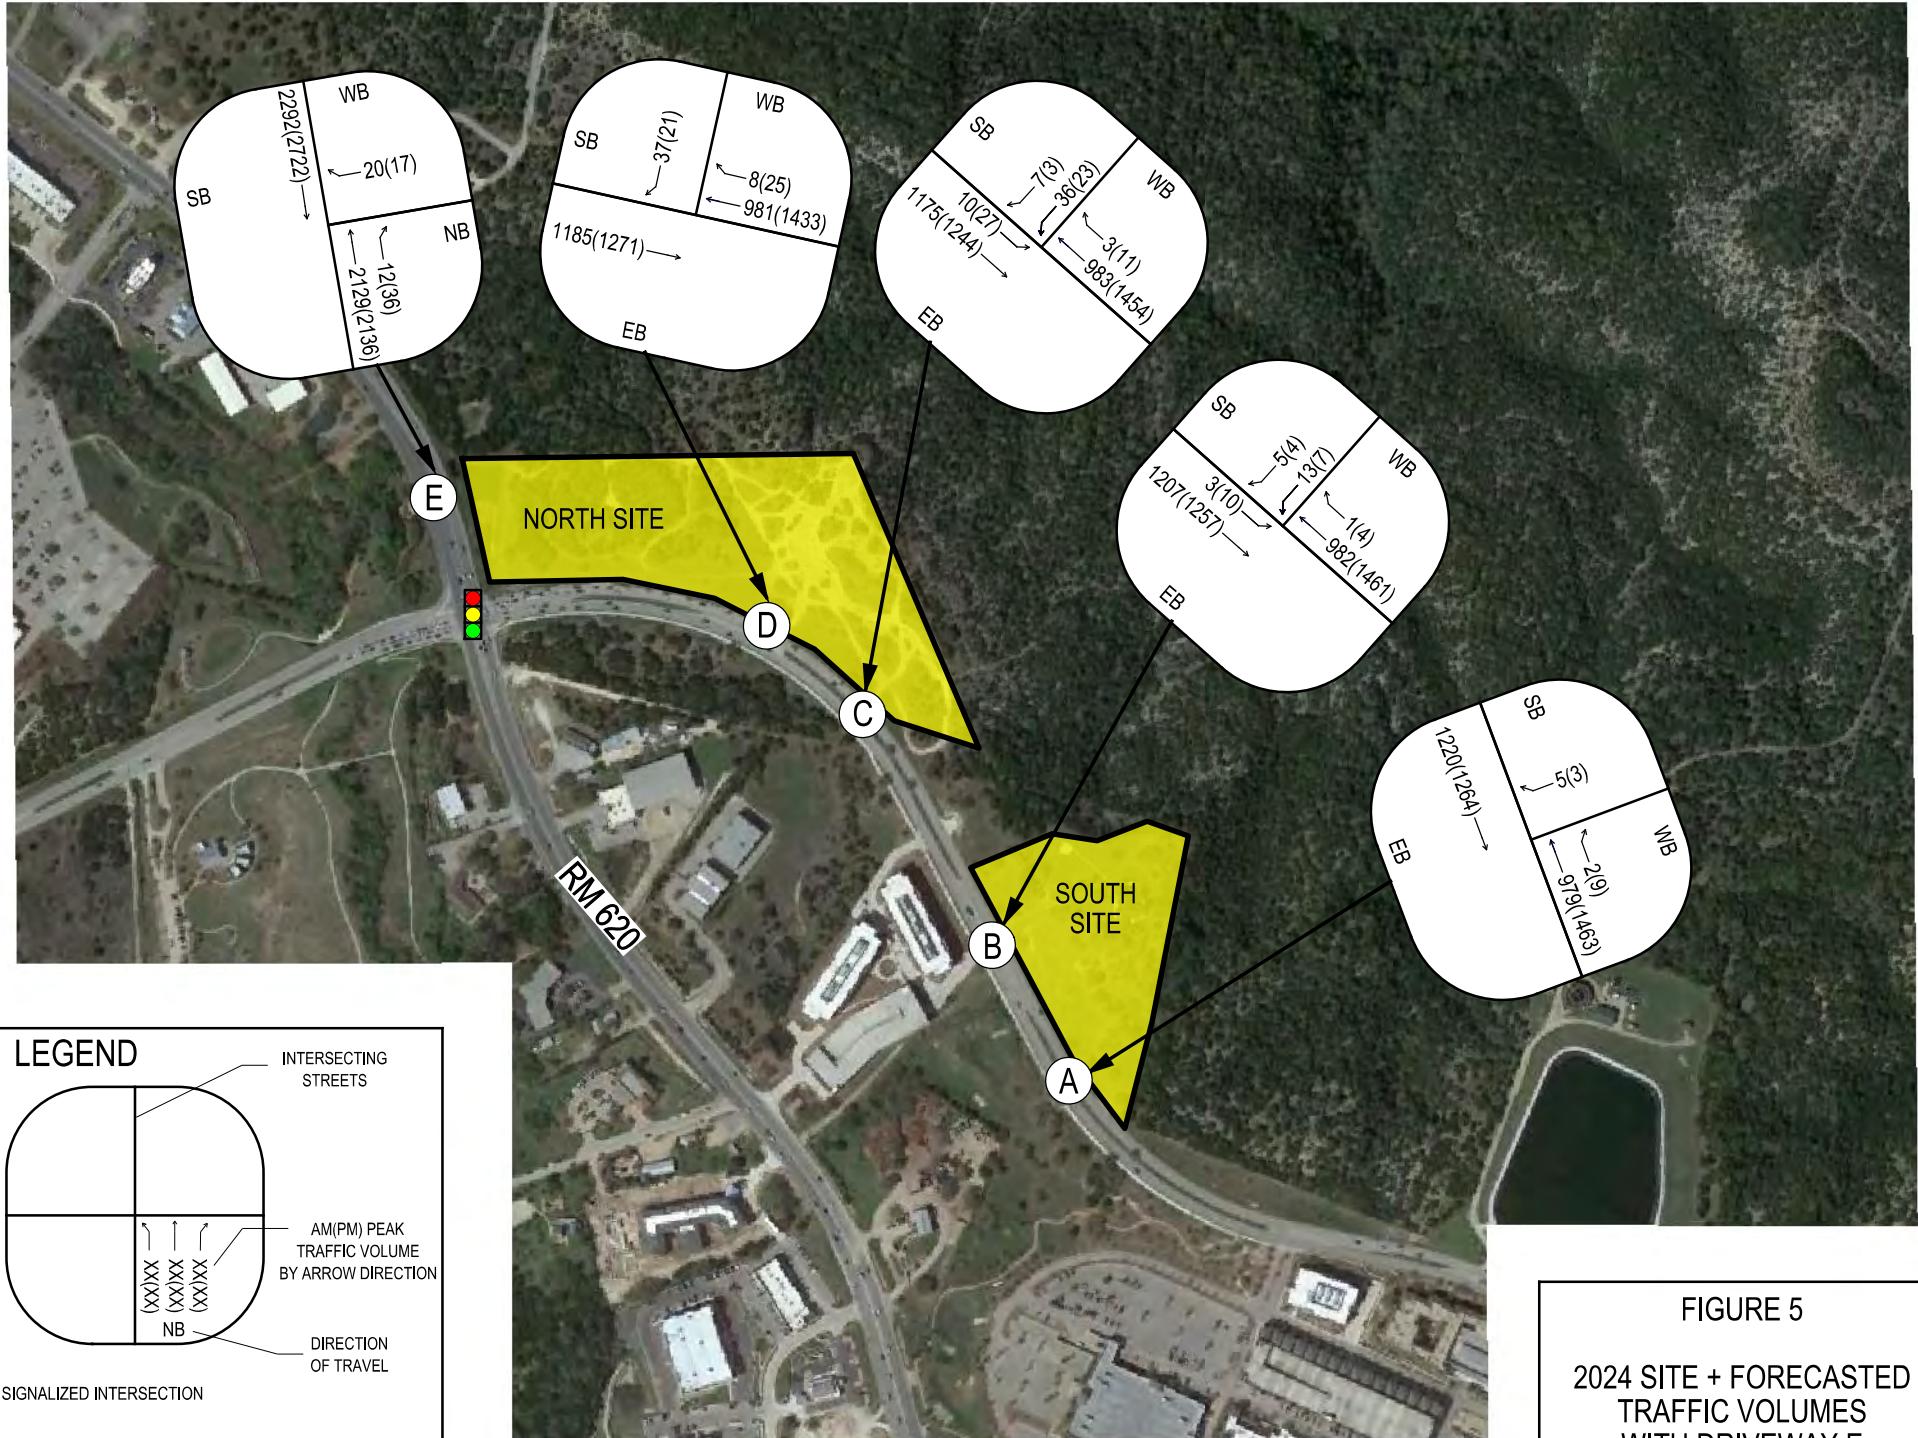

Figure 3 shows the site traffic distribution of entering and exiting traffic with Driveway E. Figure 4 shows the 2024 site plus forecasted volumes without Driveway E, and Figure 5 shows the 2024 site plus forecasted volumes with Driveway E. The Level of Service (LOS) and delay results for the minor street approaches are presented in Table 4. Table 5 compares the LOS and delay results for the eastbound and southbound left-turn movements at Driveway B and Driveway C with and without Driveway E.

	Southbound	F	100.9	F	429.7	F	90.7	F	302.9

### Summary and Recommendations

- The average delay for vehicles turning left out of Driveway B and Driveway C is approximately 2.5 minutes and 7 minutes, respectively, due to insufficient gaps in traffic on Bee Cave Parkway.
- Driveway B and Driveway C minor street approaches operate at LOS F during the PM peak hour with and without Driveway E. The driveways do not meet the 75 vehicle threshold needed to warrant a signal.
- If constructed, 32 and 53 vehicles are projected to utilize Driveway E during the AM and PM peak hours, respectively.
- With vehicles rerouting from Bee Cave Parkway to SH 71 and RM 620 to utilize Driveway E, the average delays for left-turning vehicles at Driveway B and Driveway C do see a reduction. The minor street left-turn movement average delays at Driveway B and Driveway C are approximately 2.5 minutes and 5 minutes, respectively.
- Based on field observation and a review of signal timing, the RM 620 and Bee Cave Parkway traffic signal provides continuous flow of northbound through vehicles at Driveway E during the peak periods. This would create delay for vehicles exiting the proposed Driveway E, as they would have difficulty finding gaps in the traffic on RM 620, during peak periods. Lesser delays are anticipated for vehicles exiting Driveway E during off peak times.
- Driveway E would be constructed approximately 370' north of Bee Cave Parkway and does not meet TxDOT Access Management Manual driveway spacing requirements.
- A full-length deceleration lane cannot be accommodated at the proposed Driveway E location.

- Progression of the westbound to northbound right-turn movement from Bee Cave Parkway onto RM 620 should be prioritized at this location.

The addition of Driveway E provides peak period delay reduction to Driveway C traffic operations. However, Driveway E must be located closer than desirable to Bee Cave Parkway with a shortened deceleration length. Construction of Driveway E is not essential to operations of the Terrace Development.
